

tigunia Flexible Compute Hosting

Dedicated Server Hosting and Cloud Storage Solutions

Flexible Compute from Tigunia offers guaranteed performance with best-in-class servers and cloud storage backed by physical infrastructure constructed exclusively with Microsoft and Cisco technologies. The hosting and storage client is created in a virtual cloud, meaning that its storage is complete isolated and self-serviceable. You control user access, virtual machine creation, and automation as your business demands. It's completely customizable to your computational, availability, performance, and storage needs.

Not only do you get extremely competitive infrastructure at a competitive price compared to other major hosting providers, you also get direct-to-tech support for your infrastructure. There is no waiting on hold with customer service agents that escalate reported problems. When you call Tigunia, you get access to 100 percent North American-based technical support that can begin working on your technical issue immediately and with as little as escalation as possible. You stay productive, your environment stays available, you can continue to perform and grow your business.

Get Benefits from Tigunia You Won't Get Elsewhere

Dedicated physical server space

Secure console-level access available

Direct-to-tech support for your environment

Don't Let Your Technology Hold You Back

Technology should exist to increase your productivity and to improve your business's bottom line. When it's not doing that, it's failing. That's why, with Flexible Compute, small- and medium-sized businesses get enterprise-level performance and extremely flexible pricing and scalability options. The included Virtual Data Center gives your organization the option of adding capacity or installing additional IT infrastructure without purchasing costly hardware. Your entire infrastructure is managed in the cloud, and you only pay for the resources that you use - nothing more. And with business- and industry-specific automation options, you can keep your business compliant with all industry and governmental regulations without even worrying about it. Get the computing infrastructure that your business deserves.

- ✔ Securely control and monitor remote routers, switches, and servers over your organization's network using secure encryption, allowing system administrators to reduce downtime and trouble devices from anywhere.
- ✔ Get access to a Virtual Data Center, which provides on-demand computing, storage, and networking and places it right at your fingertips.
- ✔ Enterprise-level performance and security, including complex encryption for your data while either at rest or in motion.
- ✔ Unique specialization and industry-specific automation can be implemented to keep your business ahead of the curve, providing your organization with a completely customizable environment.
- ✔ Expert support staff maintain and support your environment and are available whenever you may need them, 24/7/365.
