Secure Your Business

Advanced Defend from Tigunia and powered by CrowdStrike brings together the most advanced endpoint antivirus protection, managed threat hunting and response, and cloud-scale analytics to keep you and your business data secure. Leveraging the power of data, enriched telemetry, artificial intelligence, and dedicated threat hunting analysts, there is no threat that can't be defended against. With Advanced Defend, you can start fast and strong with easy implementation, improve contiunously through regular audits and tuning guidance, and respond to threats faster and with more confidence than ever before. And with Tigunia at your side, you never face these security threats alone.

Comprehensive Benefits

Fast setup and performance

Better protection

Fast, confident response

Strong technology backed by strong analysts

Real-time visibility

Continuous improvement and limitless scalability

Technical Features

Get everything you need to stay secure with Advanced Defend.

- Machine learning and artificial intelligence detect known and unknown malware and ransomware
- Behavior-based indicators of attack (IOAs) prevent sophisticated fileless and malware-free attacks
- Exploit blocking stops the execution and spread of threats via unpatched vulnerabilities
- Threat intelligence prevention blocks activities known to be malicious
- Automated IOA remediation cleans up known artifacts left behind from blocked malicious activity

- Enable threat hunting - proactive and managed - with full endpoint activity details
- Provides details on each attack with Incident Workbench enriched with context and threat intelligence data
- See the big picture - delivers situational awareness on the current threat level of the organization, and how it's changing over time
- Understand endpoint security posture and take recommended actions to reduce risk
- Personal analyst ensures you are aware, optimized, and have a fast path for answering questions
- Continuous raw event recording provides unparalleled visibility

- Skilled teams perform proactive 24/7 outreach for critical, active threats that are not addressed within 60 minutes
- Complete turnkey solution with no additional hardware or deployments
- Uses network effect to protect everyone against a new threat, regardless of where it is encountered
- Zero maintenance overhead, meaning no additional custom tuning, costly consulting, re-architecting or maintenance overhead
- Automatically scales and grows with demand and change

Four Lines of Defense in One Service

Advanced Defend brings together a holistic suite of security resources to keep your most precious data protected. Additionally, it pairs perfectly with Tigunia's RMM service by building on its policies, patching, and foothold detection with the following features:

Falcon Prevent

Falcon Prevent offers the ideal antivirus replacement solution by combining the effective prevention technologies with full attack visibility and simplicity. This next-generation antivirus protects against all types of threats, from commdity malware to sophisticated attacks. With fast and easy deployment, this service is full operation in seconds - no fine-tuning or costly infrastructure upgrades - all while operating with near zero impact on the endpoint.

Falcon Insight

Falcon Insight delievers continuous, comprehensive endpoint visibility that spans detection, response, and forensics to ensure nothing is missed and potential breaches are stopped. This level of visibility is unparallelled, offering continuous monitoring and actionable insights against threats, whether those threats are to a single endpoint or to an entire organization. Better yet, it accelerates security operations by allowing users to minimize their efforts spent handling alerts and to quickly investigate and respond to any attacks. Intelligent detection and resolution automatically prioritizes malicious and attacker activity, while power response actions allow users to contain and investigate systems through steamlined notifications, incident triggers, and repeatable and consistent automation. Costs are kept low by eliminating on-premises infrastructure, powering everything via secure, cloud computing.

Falcon Overwatch

Falcon Overwatch extends the power of an existing team by providing a CrowdStrike threat hunting analyst who focuses on helping your organization to improve response time and drive continuous optimization. This highly-skilled analyst delivers an expert, tailored onboarding experience to ensure your Falcon technology, and the people and processes that support it, are set up for success from day one. Regular audits and expert briefings ensure that your environment is always optimized for the most efficient protection, allowing your organization and your threat hunting partners to fully understand and confidently respond to threats. Your analysts help your organization remain vigilant so that you're never caught off guard. Your analysts also offers tailored advice and investigatory support, and is available 24/7.

Threat Graph

CrowdStrike Threat Graph is the industry's leading cloud-scale AI brains behind CrowdStrike's Security Cloud. It predicts and prevents modern threats in real time using comprehensive data sets. These data sets, comprised of continous, high-fidelity telemetry with forensic-level detail, distributes workloads across the network edge and cloud infrastucture. It keeps all of your devices - Windows, macOS, and Linux - connected. Contextual relationship derivation with ML algorithms and deep analytics across billions of disjoint and siloed data elements allows for fast, on-demand search and query across real-time and historical data for speedy investigation and response. Real-time visibility with instant access to enriched data and intuitive dashboards for advanced workflows and visualizations — covers ephemeral, online, offline and even end-of-life hosts to arm your responders with data so they can respond to threats immediately and act decisively.
