

## A Fully Integrated Productivity Solution

Microsoft 365 Business integrates productivity, management, and security into a cohesive application and cross-platform solution. You've probably heard of Microsoft Word and Microsoft PowerPoint. What you may not know is that Microsoft 365 Business is more than productivity applications and spreadsheets. You'll still get access to the desktop and web-based applications you already know and love, like Microsoft Word, Excel, OneNote, and more. But you'll also get iOS and Android-applications, with included access to up to 5 tablets and 5 phones.

Microsoft 365 Business also empowers you to collaborate in real-time so that you can coauthor a single file with multiple users simultaneously, sync file storage and sharing, and manage your calendar to schedule meetings. Scheduled meetings, and their respective reminders, integrate directly into Microsoft Outlook and Teams. And if you ever need to host a meeting with individuals outside of your organization, it's as easy as sharing a link to include up to 300 users.

## Bringing together business-critical solutions

Desktop, mobile, and browser-based applications

Real-time collaboration and creation

Integrated security solutions

## Advanced security, device management, and file sharing.

Microsoft 365 and Teams helps your team stay productive from any location *and* from nearly any device. Maintain the safety and security of your data with built-in security tools that are enabled by default. With file encryption, multi-factor authentication, and native protections from online threats (such as email phishing), businesses of any size can get enterprise-level protection. And when you license through Tigunia, you get support from Tigunia. That means 100% US-based support services without the wait times you'd get with Microsoft.

- ✔ Built-in security and privacy tools that automatically update.
- ✔ Enterprise-level security and email filtering enabled by default in Microsoft 365 Business Premium.
- ✔ Meet key international, regional, and industry-specific standards and terms automatically with security controls.
