# tigunia Microsoft 365 Security Tools

Integrated Security Tools Across Devices

Microsoft's latest iterations of Windows and Office continues the trend of removing the barriers between the device and the cloud. With greater connectivity and reliability on the cloud comes a greater number of exploits, if users and administrators aren't careful. This is where Microsoft 365 Defender comes in. Even the smallest business can be a target for a cybersecurity attack, so they deserve enterprise-grade endpoint security that is both easy-to-use and cost-effective.

Microsoft 365 Defender is deployed across devices and uses automated built-in intelligence to rapidly protect, detect, and respond to threats. Its easy setup allows users to leverage a streamlined onboarding process and and management experiences that provides actionable insight. You get protection across devices and operating systems that proactively guards against threats using human and AI analysis of trillions of signal points. Comprehensive, integrated security solutions give you peace of mind so that you can focus on what matters most.

Simple on-boarding with right-out-of-the-box security
Threat dashboard keeps
you informed
Next-generation protection
that updates automatically

Deploy quickly using
recommended security policies

Scale your security and evolve your defenses.

With Microsoft 365 Defender, you can gain the upper hand against sophisticated threats like ransomware and nation-state attacks, advance beyond endpoint silos, and put time back in the hands of defenders to prioritize risks and elevate your security posture. Powered by the brainpower of Microsoft Threat Experts and their increasingly intelligent AI, threats are no match. And when you partner with Tigunia for your Microsoft 365 needs, you gain the expert insight and dedicated customer service that we are known for.

- Protect your email against spam, malware, and known threats with Exchange Online Protection.
- Meets key international, regional, and industry-specific standards and terms, with more than 1,000 security and privacy controls
- Control who and when someone has access to your business information with security groups and custom permissions
- Create password policies that require users to reset their passwords after a specified number of days.
