

Integrated and Seamless Communication Tools

Microsoft is known for creating collaboration tools and empowering teamwork. The flagship communication applications include Outlook and Teams. Microsoft Outlook allows users to connect, organize, and get things done with comprehensive email, calendar, tasking, and scheduling features in one place. Get organized by simplifying your scheduling needs and stay on-track with ongoing projects by using integrated Microsoft To-Do lists. Even better, you have access to intelligent features that can make life easier by locating messages, people, and files with Outlook search.

Outlook seamlessly integrates with Microsoft Teams. Schedule a Team video meeting directly in Outlook, and receive relevant reminders and meeting alerts in both applications. Your availability status is reflected in both Teams and Outlook, and your calendar can be updated from either place. This keeps you organized and on-track with all of your projects. And with end-to-end encryption options for chats, emails, and video meetings, you can feel secure knowing that your most private information is kept secure.

Bringing together business-critical solutions

Desktop, mobile, and browser-based applications

Real-time scheduling and booking

Integrated security solutions

Two applications working hand-in-hand to keep you connected.

Microsoft Outlook and Teams helps your organization stay connected from any location *and* from nearly any device. With desktop, mobile, and browser-based applications included, you won't miss a thing. Unless you want to. With quiet hours and out-of-office settings, you can disconnect when you're away. Get the best of what keeps you connected, on your own terms. And when you license through Tigunia, you get support from Tigunia. That means 100% US-based support services without the wait times you'd get with Microsoft.
