Why SaaS Protection for Microsoft 365?

While Microsoft 365 does include primitive restore capabilities for lost data, two major issues arise when using their tools: lost data and lost time. Therefore an independent data backup solution separated from the app itself is necessary to avoid the most common data loss pitfalls.

The result? Peace of mind knowing that your critical Microsoft 365 data is backed up 3 times a day. Our SaaS Protection also gives you the option to store an unlimited amount of data in a private, purpose-built cloud maintained by Datto, our vendor solution partner.

Simple, automated, and secure backup that covers Exchange, OneDrive, Sharepoint, Teams, and more.

## What is Covered by SaaS Protection for Microsoft 365?

Teams
Files, conversations, and calendar meetings in public channels

OneDrive & Sharepoint
All files with file structure, all site collections, document libraries, and site assets

Outlook Mail, Calendars, and Contacts
All contact information, events, and emails, notes, and folder structure

Why is Microsoft 365 Backup Insufficient?

There is a misconception that Microsoft provides sufficient backup, but this is not the case. Let's take a look at why relying on Microsoft to keep your business data safe puts you at risk and how data loss can occur:

Ransomware: If your business suffers a ransomware attack, this puts you at risk of losing not only your valuable business data but also a hefty sum of money to criminals—without any guarantee your files will be unlocked. Microsoft recommends third-party backup as the only way to recover from data loss associated with ransomware encryption

Permanent deletion: When a SharePoint Online administrator deletes a site collection, all data will be placed in the Recycle Bin where it is kept for 93 days. It is automatically and permanently deleted after this time, and there is no rollback option

Inactive licenses and app outages: An active Microsoft 365 license is required to access data. Unfortunately, inactive or deprovisioned user data is permanently deleted, and there is no rollback option. Additionally, uptime is great until an outage occurs, planning for the unexpected is key to recovering quickly when an app outage occurs.

Fast and Effortless Restore

To maintain a secure and compliant business environment, SaaS Protection doesn't just backup your data, it enables you to save money and effort by preserving inactive Microsoft 365 users for as long as you need it. Therefore by reducing time spent on backups, your IT team can focus on strategic initiatives that drive growth for your business.
